

Customer Journey Map

Date: 30.09.2026 Team ID: MKU201AutoTicket Project Name: Auto ticket classification using Flow Designer

Phase of Journey	Stage 1 Ticket Creation	Stage 2 Auto Classification	Stage 3 Assignment & Update
Actions What does the customer do?	- Creates an IT ticket - Enters short description - Provides description and caller details	- Submits the ticket - Flow Designer evaluates the ticket - Category/subcategory are identified automatically	- Receives the updated ticket - Reviews the classification/assignment - Follows the support process
Touchpoint What part of the service do they interact with?	- Incident Workflow form - Short Description - Description - Caller field	- Flow Designer trigger - If / Else If conditions - Classification rules	- Incident Workflow record - Category/Subcategory - Assigned Group / Assigned To
Customer Thought What is the customer thinking?	"I need to report my IT issue clearly." "I hope the ticket is submitted correctly."	"I hope the system understands my issue." "I should not have to classify it manually."	"I want my ticket to reach the right support team." "I want the issue handled efficiently."
Customer Feeling What is the customer feeling?	Concerned about the issue; focused on providing the required information.	Expectant and relieved that classification is automated.	More confident when the ticket is correctly categorized and assigned.
Process Ownership Who is in the lead on this?	Customer / Ticket creator ServiceNow Incident Workflow	Flow Designer automation Configured classification logic	Service desk / Assigned support group ServiceNow workflow
Opportunities How can we improve this stage?	- Keep the form simple - Make required fields clear - Encourage useful descriptions	- Improve classification conditions - Add more ticket categories - Reduce manual classification	- Improve assignment accuracy - Add more routing rules - Monitor and refine the flow
