

Empathy Map

Date	30.09.2026
Team ID	MKU201AutoTicket
Project Name	Auto ticket classification using Flow Designer
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS		THINKS
Incoming tickets should be classified quickly. The right category and assignment are important. Manual ticket sorting takes too much time.		Automation can reduce repetitive classification work. Correct routing will help resolve issues faster. I need consistent classification for every ticket.
	School IT Helpdesk Agent (Primary User)	
Reviews the caller's issue and ticket details. Identifies the category and subcategory. Assigns the ticket to the appropriate group or person.		Frustrated by repetitive manual classification. Concerned about delays and incorrect routing. Relieved when tickets are classified automatically.
