

PROJECT EVALUATION DOCUMENT

2. Coding & Solution

Project Title	Auto Ticket Classification using Flow Designer
Team ID	MKU201AutoTicket
Date	30.09.2026
Platform	ServiceNow – Flow Designer / Workflow Studio

Solution Summary

Auto Ticket Classification using Flow Designer automates the classification and routing of IT tickets. When an Incident Workflow record is created, the flow evaluates the selected category and executes the appropriate update actions.

Implementation Logic

1. Create an Incident Workflow record with caller, category, sub-category, short description, description, state, assigned group and assigned-to fields.
2. Trigger the flow when the record is created and the required category condition is met.
3. Evaluate service-desk classifications using If / Else If branches.
4. Update the incident record according to the matched classification.
5. Continue the flow for additional classifications using reusable Update Record actions.

Classification Examples Visible in the Flow

Condition / Category	Solution Action
SD is WiFi or Network	Update Incident Workflow Record
SD is Project or Hardware	Classification branch available for corresponding routing
SD is Forgot password	Classification branch available for corresponding routing

ServiceNow Configuration Evidence

The screenshot shows the ServiceNow 'Table - New Record' configuration page. The browser address bar indicates the URL: `dev323313.service-now.com/now/nav/ui/classic/params/target/sys_db_object.do%3Fsys_id%3D-1%26sys_is_list%3Dtrue%26...`. The page title is 'Table - New Record'. A yellow banner at the top states: 'ServiceNow recommends creating custom tables in scoped applications. To learn more about creating scoped applications, click [here](#).' Below this, a blue box explains: 'A table is a collection of records in the database. Each record corresponds to a row in a table, and each field on a record corresponds to a column on that table. Applications use tables and records to manage data and processes. [More Info](#)'.

The configuration form includes the following fields:

- * Label:** Incident Workflow
- * Name:** u_incident_workflow (A red error message states: 'Table name u_incident_workflow is already in use')
- Extends table:** (Empty field with a search icon)
- Application:** Global
- Create module:** ☒
- Create mobile module:** ☒
- Add module to menu:** -- Create new --
- New menu name:** Incident Workflow
- Remote Table:** ☐

Below the form, there are tabs for 'Columns', 'Controls', and 'Application Access'. The 'Columns' tab is active, showing a 'Table Columns' section with a search bar and a 'Dictionary Entries' section.

ServiceNow table configuration for the Incident Workflow table.

The screenshot shows the ServiceNow 'Update Set' configuration page. The browser address bar indicates the URL: `dev323313.service-now.com/now/nav/ui/classic/params/target/sys_update_set_list.do%3Fsysparm_userpref_module%3D5004...`. The page title is 'Update Set'. The configuration form includes the following fields:

- * Name:** Project Update Set
- State:** In progress
- Parent:** (Empty field with a search icon)
- Release date:** (Calendar icon)
- Install date:** (Empty field)
- Installed from:** (Empty field)
- Description:** (Empty text area)
- Application:** Global
- Created:** 2026-09-24 07:36:39
- Created by:** admin
- Merged to:** (Empty field)

Below the form, there is an 'Update' button and a 'Related Links' section with links: [Merge With Another Update Set](#) and [Scan Update Set](#).

At the bottom, there are tabs for 'Customer Updates (59)', 'Update Set Logs', 'Child Update Sets', and 'Install History'. The 'Customer Updates (59)' tab is active, showing a table with columns for 'Created' and 'Search', and an 'Actions on selected rows...' dropdown.

Project Update Set used to capture and transport the project configuration.
